Electric Vehicle Market Performance & Insights

1.Project Overview

This project analyzes electric vehicle (EV) market data using Tableau Public. The main purpose is to understand vehicle sales, customer ratings, driving range, battery types, and manufacturing trends through interactive visualizations.

2. Project Objective

- Analyze electric vehicle sales by manufacturer and category.
- Compare customer ratings across manufacturers and battery types.
- Study vehicle driving range and drivetrain.
- Explore manufacturing countries and battery types.
- Present the findings using a Tableau dashboard.

3.Tools and Technologies

- Tableau Public: For data visualization and dashboard creation.
- GitHub: For project file storage and sharing.
- Dataset: Electric Vehicle Market dataset.

4.Data Description

The dataset includes fields such as Category, Battery Type, Manufacturer, Manufacturing Country, Customer Rating, Annual Sales Units, Vehicle ID, Range Km, and Drivetrain.

5. Visalisations

The dashboard contains the following nine visualizations:

1. Sales by Manufacturer
2. Sales by Category
3. Customer Rating by Manufacturer
4. Vehicles by Battery Type
5. Average Driving Range by Category
6. Sales by Manufacturing Country
7. Average Rating by Battery Type
8. Sales by Drivetrain
9. Average Range by Battery Type

6.Dashboard link:

https://public.tableau.com/app/profile/anvesha.neekhra/viz/Book1_17929137748520/Dashboard2?publish=yes

7.key Insights

The dashboard helps users compare sales, customer ratings, vehicle range, battery types, and drivetrain categories. Specific conclusions should be based on the values shown in the final dashboard

8.Conclusion

This project demonstrates how Tableau Public can be used to analyze electric vehicle market data and present information through interactive charts. The dashboard can help viewers explore market patterns and compare vehicle characteristics.
